Optimising Hull, Mooring and Riser ROV/UAV Inspections – An Industry Position
Contents

1. What is the RHUM collaboration forum?

2. RHUM focus topic: Optimisation of ROV/UAV inspections

3. Industry position
   a. Suppliers / Contractors
   b. Operators

4. Panel discussion
1. What is the RHUM collaboration forum?
1. What is the RHUM collaboration forum

**Background**
1. Evolution of individual ‘coffee catchups’ – providing group focus and networking
2. Founded March 2016
3. Self funded (the time we provide)

**Purpose**
1. Regular structured forum to enable informal Operator sharing of best practices for technical, safety & operation for hull, marine and related subsea disciplines
2. Share knowledge of new (public domain) technologies and practices which will benefit the industry
3. By sharing best practice, avoid repeated inefficiencies and mistakes which could have an impact on safety, environment and economics
4. Identify and escalate key topics that require formal collaboration
5. Share learnings associated with Regulatory matters (e.g. NOPSEMA, AMSA, Class)
6. Interface with other collaboration forums
1. What is the RHUM collaboration forum

Participants

- BHP
- ConocoPhillips Australia
- Jadestone Energy
- Santos
- Chevron
- INPEX
- Upstream Production Solutions
- Woodside
2. RHUM focus topic: Optimisation of ROV/UAV inspections
2. RHUM focus topic: Optimisation of ROV/UAV inspections

**Challenge:** Balancing & bridging gap between supplier offering & operator requirements

**Suppliers**
- Develop new technology

**Operator**
- Improve integrity management

![Diagram showing the balance and integration between suppliers and operators, leading to an optimised inspection.]

- Optimised inspection
2. RHUM focus topic: Optimisation of ROV/UAV inspections

**How could the RHUM collaboration forum assist with this process?**
- Facilitate dialogue between Supplier and Operators
- Agree common goals & directions

**What we did and are doing (developing an industry position)**
- December 2017: Supplier lead discussion
- Aim of session: 'With a focus on new technologies, discussion around optimisation of inspection methods and their integration into the wider integrity management process. Agree the two most important topics which could benefit from collective action.'
- Numerous subsequent operator meetings to discuss requirements and vision
- Present the findings to you today
3. Industry position
3a. Industry position – Suppliers

➢ Agreed that each Operator could provide:
  i. High-level 5-year ambition for ROV/UAV inspection progress
  ii. Short list of key drivers to act as a framework in achieving this ambition
Key drivers

• Safety: Reduce manhour exposure offshore
• Economics: Demonstrably cost effective compared to manned inspection
• Data: Capture only useful data & enable better use of data
• Technology risk: Palatable to Operators and Suppliers
3c. Industry position – Operator vision: 5-year horizon

<table>
<thead>
<tr>
<th>Now</th>
<th>1-3 years</th>
<th>4-5 years</th>
</tr>
</thead>
</table>

**Vehicles & tooling:**
- ROV GVI, CVI & TMs for WBTs, external hull, mooring & risers
- UAV GVI, CVI cargo & WBT in dock, & external hull on station
- Remote camera GVI & CVI of cargo tanks

**Navigation / location:** Manually piloted, line of sight (tanks & hull), USBL (moorings & risers)

**Data:** Mostly still ‘traditional’ pdf reports, starting to use digital systems

**Manning:** Team of 2-4 for remote inspection, Class Surveyor presence & significant levels of complementary manned inspection required (e.g. CSE, diving...)
3c. Industry position – Operator vision: 5-year horizon

<table>
<thead>
<tr>
<th>Now</th>
<th>1-3 years</th>
<th>4-5 years</th>
</tr>
</thead>
</table>

**Vehicles & tooling:** Range of vehicles with NDT tooling to accurately & repeatably report tank condition (corrosion, cracks buckling...)

**Navigation / location:** Pilot aids to reduce level of training required & make technology more accessible, navigation in tanks

**Data:** Send data directly to a digital twin

**Manning:** Smaller team (dual roles), reduction in Class Surveyor offshore attendance, significant reduction in CSE /diving requirements
3c. Industry position – Operator vision: 5-year horizon

<table>
<thead>
<tr>
<th>Now</th>
<th>1-3 years</th>
<th>4-5 years</th>
</tr>
</thead>
</table>

**Vehicles & tooling:** NDT capabilities comparable or superior to manned inspection, intrinsically safe devices for live hydrocarbon tanks

**Navigation / location:** Autonomous navigation / location & flight in all situations

**Data:** Fed directly into live analysis models for real time integrity status

**Manning:** CSE mostly eliminated for tank inspection, Class Surveyor and Inspector shore based with live link

NB: Technologies shown for example only - other brands are available!
